Cents per litre, with GST. Each common date counts once. Retail is the mean of the saved daily capital averages, not the station-day-weighted headline mean. TGP uses the same dates and carries the last published value for at most six subsequent calendar days. Retail prices can already include carried station prices. Means and spreads are rounded separately. The gross spread is not profit or a causal explanation. Retail carry limit: 30 days. Unmatched days are excluded; the common-day count is not a station or sales coverage percentage.

The listed count is the inventory used at build time, not a historical census of every operating station. One station selling two fuels on one day contributes two station–fuel–days. Fuel-specific counts must not be added to obtain a distinct station total. Calendar days describe the date window, not the number of new observations. A dash means the saved edition does not supply that count.
Carried retail price counts and excluded raw report counts were not retained; their shares are unavailable.

The number of stations selling each fuel and litres sold are not recorded, so fuel-market and sales coverage percentages are unavailable.
